

Keep lighted cigarettes and all other flames spark away from the battery

Wear eye protection when charging or working near a battery.

Always provide ventilation when working in an enclosed space.

When lifting a plastic cased battery, excessive pressure on acid may cause leaks resulting in personal injury. Lift with a battery carrier or with your hands on opposite edges.

Never attempt to change the battery when the battery cables are connected.

The electrical ignition system works with high voltage. Never touch these components with the engine running or the ignition switched on.

Keep batteries out of the reach of children. Batteries contain highly corrosive SULFURIC ACID. Do not allow battery acid to make contact with your skin, eyes, clothing or paint finish.

If any electrolyte gets into your eyes, wash your eyes with clean water for at least 15 minutes and get immediate medical attention. If possible, continue to apply water with a sponge or cloth until medical attention is received.

If electrolyte gets on your skin, thoroughly wash the affected area.

If you feel pain or a burning sensation, get medical attention immediately.

Always read and follow instructions carefully when handling a battery.

Hydrogen, which is a highly combustible gas, is always present in the battery cells and may explode if ignited.
